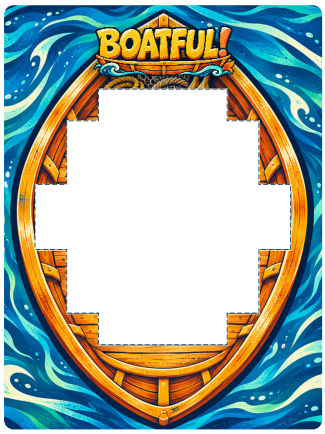
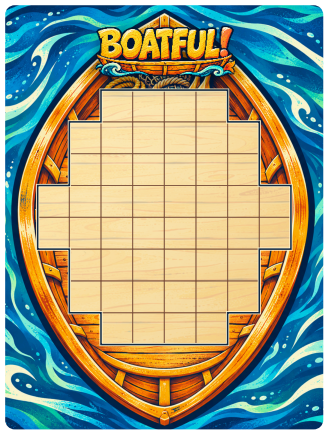
Build a Boatful! tray

A raised board with a sunken hold, so the fish drop in and stay put



Frame (page 2)
cut out the hold

+



Base (page 3)
stays whole

+

Fish (page 4)

You will need

- Three A4 sheets of card, or paper glued onto card.
- Thick card or foam board (3–5 mm) for the frame, so the hold is deep enough to hold the fish.
- Glue stick or PVA, scissors, and a craft knife and cutting mat (grown-up job).

How to make it

1. Print pages 2–4 at **100% / actual size**. Measure the ruler on page 2: it should be exactly 100 mm.
2. **Frame:** glue page 2 onto thick card or foam board. Cut around the rounded edge of the board, then carefully cut out the hold along the dashed line.
3. **Base:** glue page 3 onto card and cut around the rounded edge.
4. Glue the frame on top of the base, lining up the edges. The grid on the base shows through the hold.
5. **Fish:** glue page 4 onto card (the same thickness as the frame or thinner) and cut out the ten fish along their dark outer edge.

The hold is cut 0.5 mm bigger all round so the fish fit easily. Use the challenge cards from the main print pack, or play on the website.
